

WORKFLOW 02 — SALES PIPELINE & FOLLOW-UP AUTOMATION

PURPOSE: Monitor active sales opportunities, identify deals requiring attention, and prepare and route appropriate follow-up actions while keeping the sales owner in control.

DECISION & FOLLOW-UP LOGIC	SYSTEM COMPONENTS & CONTROLS
• Deal still active? → Continue monitoring; closed deals are excluded. • Follow-up required? → YES: prepare follow-up action. NO: maintain normal pipeline monitoring. • Existing valid follow-up task? → Avoid unnecessary duplicate task creation. • Sales owner resolved? → Route the action to the responsible owner. • Human sales owner → Reviews the recommendation and performs the customer-facing follow-up.	HubSpot CRM → n8n → Deal Activity Analysis → AI Follow-Up Assessment HubSpot Tasks → Sales Owner Notification → Human Sales Review Scheduled pipeline review keeps active opportunities under recurring monitoring. Duplicate-task prevention helps avoid repeated follow-up actions for the same opportunity.

ARCHITECTURE PRINCIPLE: *The automation identifies follow-up risk and prepares the required sales action; the sales owner retains responsibility for the actual customer-facing decision and follow-up.*
