

WORKFLOW 03 — CUSTOMER ONBOARDING AUTOMATION

PURPOSE: Initiate and organize client onboarding after a successful sale, collect required client information, prepare project kickoff, and keep the CRM and internal team aligned.

INPUT CLOSED-WON DEAL A sales opportunity has been successfully completed in HubSpot.	→	01 — ELIGIBILITY ONBOARDING TRIGGER & ELIGIBILITY Review completed deals and determine whether onboarding is required.	→	02 — INITIATE ONBOARDING INITIATION Set onboarding to In Progress and retrieve client, contact and deal-owner context.	→	03 — CLIENT CLIENT ONBOARDING Create the onboarding record and send a welcome message with the required onboarding form.	→	04 — UPDATE INFORMATION COLLECTION & RECORD UPDATE Match the submitted form to the onboarding record and update the collected information.	→	05 — OUTPUT KICKOFF PREPARATION & HANDOFF Create the kickoff task, update the next action, notify the team and prepare the client for project kickoff.
--	---	---	---	---	---	---	---	---	---	---

ONBOARDING & DECISION LOGIC • Closed-Won deal? → Eligible opportunities can enter onboarding. • Onboarding required? → YES: continue. NO: stop without restarting. • Onboarding record → Create or update the appropriate client onboarding record. • Form submitted? → Match the submission to the onboarding record and update client information. • Kickoff preparation → Create the internal task and prepare the responsible team member's next action. • Closed-Won deal → Remains Closed Won; onboarding does not reopen the sales opportunity.	SYSTEM COMPONENTS & CONTROLS HubSpot CRM → n8n → Google Sheets / Onboarding Tracker → Tally HubSpot Tasks → Slack → Internal Project Kickoff Client communication → Welcome email + onboarding form. CRM next action → Prepare project kickoff when onboarding reaches the kickoff stage. Human team → Reviews onboarding context and carries out project preparation and delivery.
---	---

ARCHITECTURE OUTCOME: A successful sale transitions into a structured onboarding process, with client information organized, the CRM opportunity preserved, and the internal team prepared for project kickoff.

ARCHITECTURE PRINCIPLE: *The automation coordinates the transition from sales to delivery while preserving the Closed-Won record as the source of sales history and keeping the team responsible for project execution.*
