

WORKFLOW 04 — CRM LEAD REACTIVATION SYSTEM

PURPOSE: Identify inactive open opportunities, determine whether they are suitable for reactivation, prepare personalized re-engagement, and return responsive prospects to active sales follow-up without creating duplicate opportunities.

REACTIVATION & DECISION LOGIC	SYSTEM COMPONENTS & CONTROLS
• 30+ days inactive? → Candidate for reactivation review; restore the production threshold after testing. • Reactivation appropriate? → YES: prepare re-engagement. NO: leave the opportunity inactive. • Already contacted? → Avoid duplicate reactivation outreach. • No response? → Remain inactive; no unnecessary sales task. • Prospect responds? → Capture response, resolve owner and create follow-up task. • Existing deal? → Preserve and reuse the current opportunity; do not create a duplicate.	HubSpot CRM → n8n → Inactivity Detection → AI Re-engagement Preparation Outreach Control → Email → Response Monitoring → HubSpot Sales Task Supporting controls → 30-day inactivity threshold • Duplicate outreach prevention • Existing-deal preservation. Human sales owner → Reviews the response and determines the appropriate customer-facing action.

ARCHITECTURE OUTCOME: Inactive opportunities are selectively re-engaged, responsive prospects return to active sales management, and CRM history is preserved without duplicate outreach or duplicate deals.

ARCHITECTURE PRINCIPLE: The automation identifies and prepares reactivation opportunities; the sales team retains control over the customer relationship and subsequent sales decision.
